

Automation for restaurants

Proposal for the implementation of automation systems for restaurants, increasing efficiency and convenience of work.

Automatic accounting of balances

Inventory management

The system tracks food balances, generates purchase lists and analyzes ingredient consumption.

Reducing losses

Alerts you to shortages, suggests optimal orders and minimizes losses.

Integration with systems

Integrates with cash register systems and accounting programs for up-to-date data.

Mobile application for orders

Accepting orders

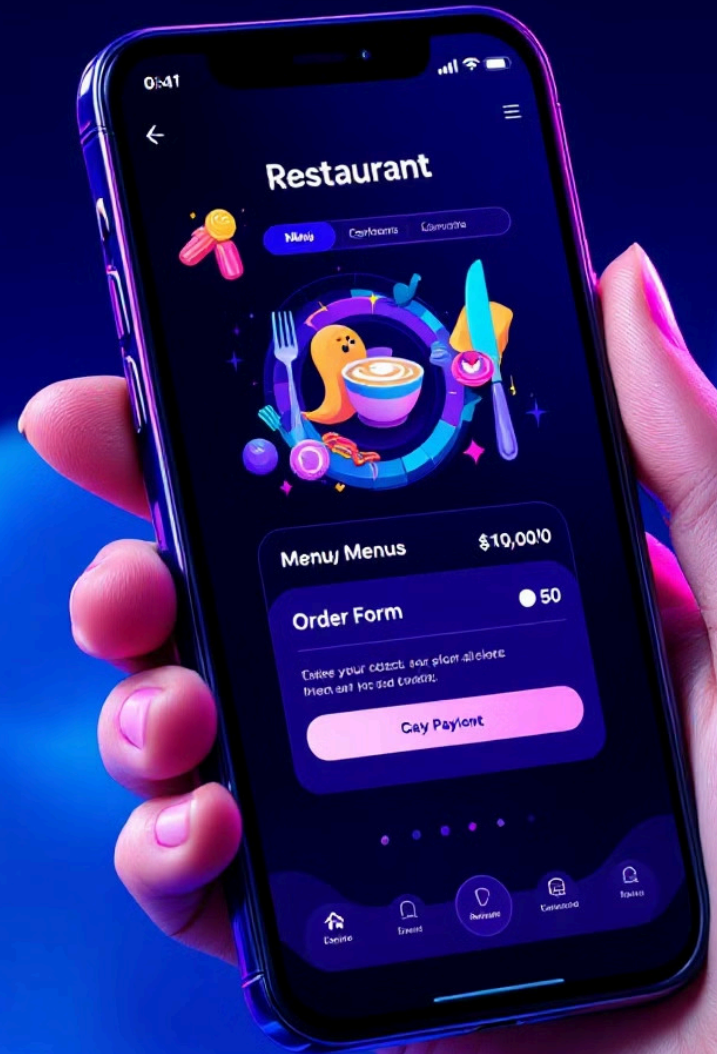

Customers browse menus, place orders and pay online.

Processing of orders

The restaurant staff processes orders through an easy-to-use admin panel.

Kitchen integration

Kitchen integration, push notifications and a loyalty system increase convenience and efficiency.

Creating a website for a restaurant

Online menu

Modern and user-friendly website with online menu, table reservation form and delivery ordering.

Mobile adaptation

Design adapted for mobile devices, social media integration and SEO optimization.

Online payment

It is possible to connect online payment and loyalty system.

Online menu by QR code

QR-code

Guests scan the code and access the current menu on their smartphones.

Menu Update

Ability to update dishes and prices in real time, integration with ordering system.

Print Minimization

Minimizing printing costs makes the process convenient and modern.

Automation of delivery note processing

1

Recognizing data

The service automatically recognizes and captures data from delivery notes.

2

Residuals update

Updates stock balances and puts items on the balance sheet.

3

System integration

Integration with accounting systems ensures accurate and transparent processes.

Financial accounting automation

1

Order processing

Process orders, calculate staff paychecks, record tips and other expenses.

2

Accurate accounting

The system integrates with the restaurant's existing processes to provide accurate and transparent accounting.

3

Financial Tracking

Simplifies the billing and reporting process and allows you to track income and expenses in real time.

Table reservation automation

Online Reservations
Customers make reservations online through the website or app.

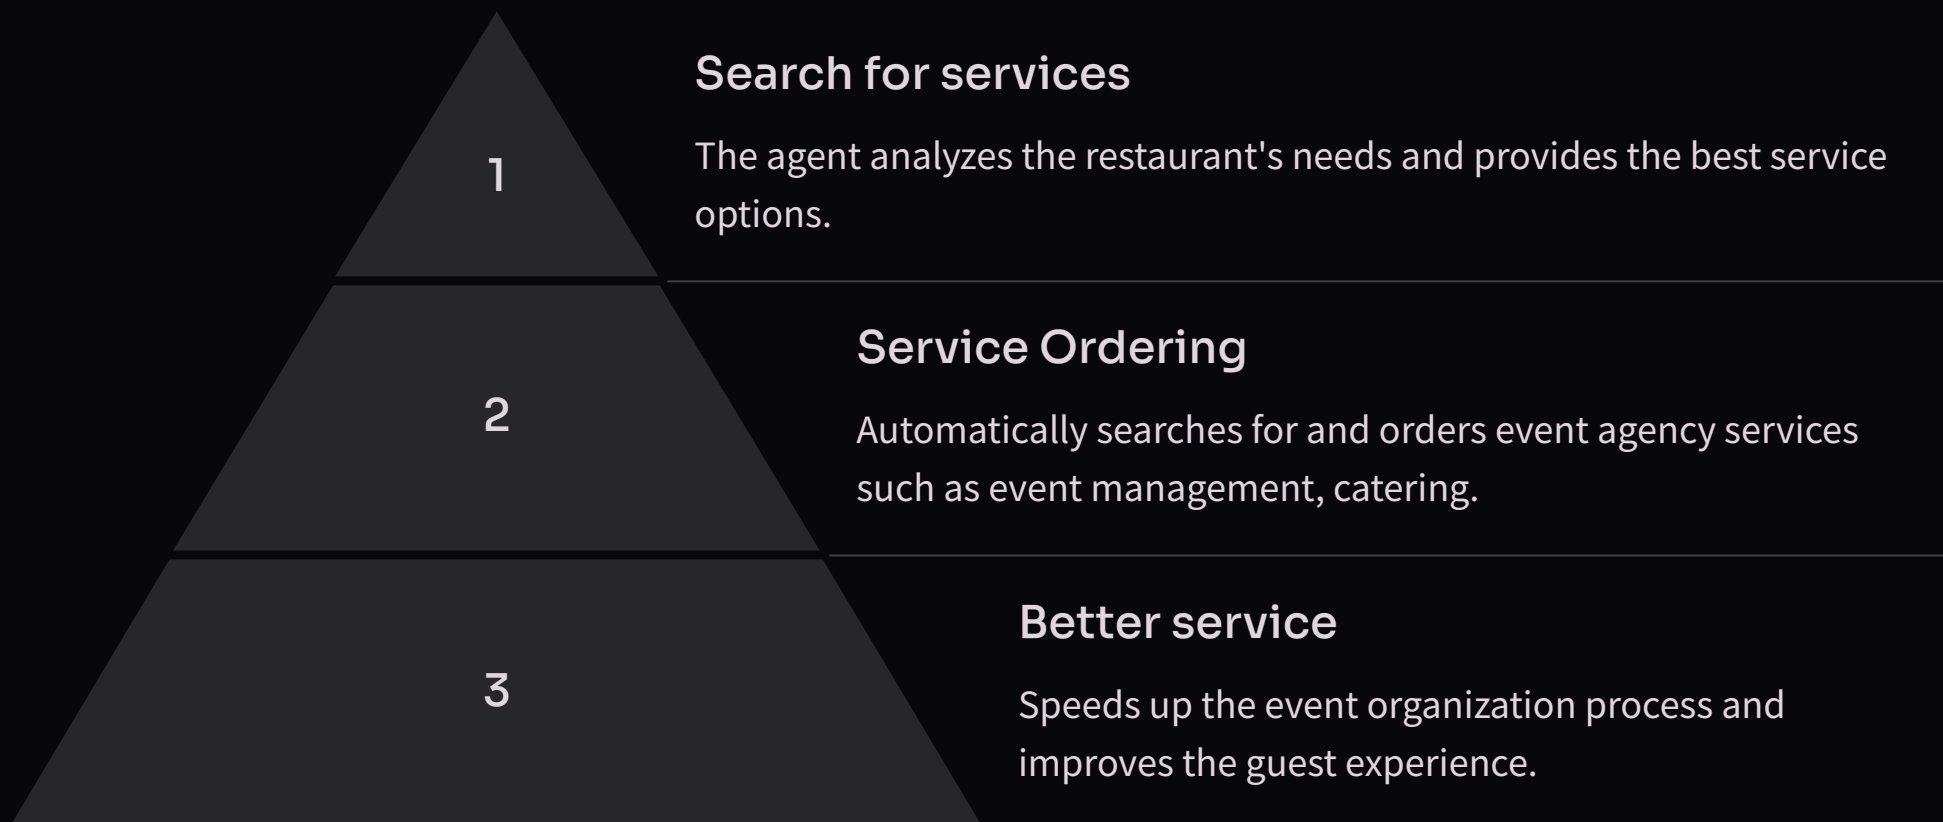

Integration with calendar

Integration with the restaurant calendar ensures that data is up to date.

Reservation management

Automated booking confirmations and reminders to customers.

AI agents to find event management agencies

Social media automation

1

Content planning

Planning and publishing content, interacting with customers and monitoring feedback.

2

Audience Analysis

The system analyzes the audience and suggests ideas for posts.

3

Improved presence

Automatically updates pages, reduces staff workload and improves your restaurant's online presence.
